FOR IMMEDIATE RELEASE

## Pressurehead Showcased at Vegas Music Conference

Pressurehead is proud to announce the worlds first hybrid speaker setup showcased in 5.1 surround configuration in the VMC screening room at the 2006 Vegas Music Conference. The Pressurehead hybrid design speakers can be used in multiple configurations and applications with equal performance and sonic integrity. The 5.1 surround configuration being showcased at the Vegas Music Conference employs four 18" Pressurehead subwoofers (*ph-1188subpa*) and six revolutionary Pressurehead hybrid speakers (*ph-8083hybpa*) for center, mains, and surround speakers. The speakers are presented without any in line equalization or processing to showcase their incredibly clear and uncolored characteristics. Pressurehead speakers truly allow the work of the artist to shine through uncolored and uncompromised.

The Pressurehead hybrid speakers are designed for use in night clubs, live sound venues, DJ rigs, and as mid-field studio monitors. The new hybrid speakers incorporate six tweeters and two eight inch drivers in a box that plays flat to 29HZ. The six tweeters are arranged in a Pressurehead exclusive mixed array configuration. This technology allows multiple speakers to be splayed vertically, horizontally, and in line array configurations, as well as more traditional setups. Additionally these speakers are designed for use in the Pressurehead exclusive "DNA splay" configuration.

Pressurehead has partnered with the Vegas Music Conference to showcase DTS recording artist BT whom will be performing live with a groundbreaking performance through the Pressurehead hybrid 5.1 surround configuration. The artist BT who has worked on composing intricate 80 piece orchestra scores for blockbuster films such as the Oscar-winner "Monster", "Stealth", and "The Fast and the Furious", in addition to working with artists such as Sting, David Bowie, Peter Gabriel, Sarah McLaughlin, Madonna, and Seal will also be showcasing his new CD/DVD entitled "This Binary Universe" at the Vegas Music Conference.

In addition to the VMC screening room Pressurehead is also showcasing an advanced technology club system in the VMS listening room. The advanced technology club system employs four Pressurehead 18" subwoofers and two high-efficiency top boxes (*ph-3124toppa*). Featuring perfect transient response, seamless imaging, and studio-quality sonic integrity, the Pressurehead advanced technology club system is setting the benchmark for the future of club sound.

The Vegas Music Conference runs from September 20th through the 24th in Las Vegas, Nevada. The Pressurehead rigs are being showcased at the Alexis Park Resort Hotel across from the Hard Rock Hotel & Casino.
